

## Gaussian 16 Available Binary Versions for Rev. A.03

### Important Notes for All Gaussian Versions (Binary and Source):

- Systems in shaded color are considered supercomputers by Gaussian, Inc, and accordingly are subject to commercial pricing (i.e. academic/US government discounts do not apply). See [price lists](#) for pricing.
- An upgraded version of **Linda** is required when upgrading from *Gaussian 09* to *Gaussian 16*.
- The Linux RedHat and SuSE versions specified for x86\_64, IA32, IA64, and IBM Power systems refer only to the *unmodified, unpatched* original media/ISO image distributions as released by the vendor.
- Platforms marked with † include GPU support for NVIDIA Tesla-K40 and Tesla-K80 boards with 12 GB of memory or higher. A version of NVIDIA Tesla drivers compatible with CUDA 7.5 or higher may be required to run on GPUs (NVIDIA drivers can be found at [www.nvidia.com/download/index.aspx](http://www.nvidia.com/download/index.aspx)).

## Gaussian 16 Available Source Code Versions for Rev. A.03

### Additional Notes for Source Code Version (see also notes above):

- In order to build on Intel-based Macintosh computers, the source code and tools must be installed on an HFS+ *case-sensitive* file system (or a UFS file system for systems where that is supported).
- Binaries for platforms marked with † can be built with GPU support for NVIDIA Tesla-K40 and Tesla-K80 boards with 12 GB of memory or higher. See Release Notes for build details A version of NVIDIA Tesla drivers compatible with CUDA 7.5 or higher may be required to run on GPUs (NVIDIA drivers can be found at [www.nvidia.com/download/index.aspx](http://www.nvidia.com/download/index.aspx)).
